

ISO 9001:2015 CERTIFIED

CUSTOM PARTS MANUFACTURING

Quality Engineered in Every Part

About Us

Our Vision: To be the world's most trusted and agile manufacturing partner, transforming complex engineering designs into flawless realities without friction or delay.

Our Mission: To deliver uncompromising engineering excellence by integrating advanced production technologies—from 5-axis CNC to industrial additive. We provide our clients with absolute precision, speed, and scalable quality in every custom part we produce.

Our Core Values:

- **Process Compliance:** Precision is built on discipline, backed by strict ISO 9001 compliance and rigorous CMM testing.
- **Timely Delivery:** Utilizing agile manufacturing to get from CAD to physical part faster than fragmented supply chains.
- **End-to-End Partnership:** Acting as a true extension of the client's engineering team under one roof, rather than just a vendor.
- **Absolute Traceability:** Delivering zero-compromise quality control from reverse engineering to final batch production.

COST-EFFECTIVE

Integrated workflows and material science minimize baseline production costs.

RELIABLE

Backed by strict ISO 9001 compliance and 50+ years of technical manufacturing depth.

SMART

Unified CNC, laser, and additive ecosystem for rapid turnaround from CAD to Part.

Why us

P.03

FASTER RESULTS.

From concept to final production, every stage is handled in-house. This eliminates handovers, reduces errors and accelerates time to market.

ONE PARTNER. TOTAL CONTROL.

Bringing a product to life should not mean managing multiple vendors, delays and inconsistencies. We simplify the entire journey – combining design, prototyping and precision manufacturing into one integrated system.

PRECISION YOU CAN TRUST.

With ISO 9001 compliant processes and dedicated inspection systems, every component that leaves our facility meets exact specifications every time.

INTEGRATED DIGITAL WORKFLOW.

Our proprietary digital thread locks in quality from day one. We bridge the gap between complex CAD data and industrial production, ensuring that what you design is exactly what we deliver.

Capabilities in-house

P.04

Additive Manufacturing

ADVANCED SLS & MULTI-JET FUSION PRODUCTION

Eliminate hard-tooling costs and bridge the gap from prototype to production. We utilize our high-throughput industrial 3D arrays delivering end-use parts in engineering-grade thermoplastics & metals with absolute geometry freedom.

Precision Manufacturing

MULTI-AXIS CNC & VERTICAL MILLING

Achieve absolute structural integrity for mission-critical parts. Our 5-Axis vertical milling centers delivers high-tolerance subtractive machining for aerospace and high-performance industrial applications.

Reverse Engineering

3D METROLOGY & CAD DIGITIZATION

We bring legacy hardware into the digital age. Our portable non-contact laser metrology and point-cloud generation brings physical artifacts back to native CAD parameters for restoration and deviation check.

Tooling & Casting

VACUUM CASTING & SOFT-MOLDING FRAMEWORKS

Unlock functional alpha-testing without the expense of injection hard-tooling. Agile production of high-fidelity polyurethane vacuum-cast parts using master silicone patterns for rapid batch verification.

Our Quality System

Repeatable production runs

Transitioning from prototype to volume shouldn't be a gamble. We provide absolute consistency from the first article to the thousandth part by locking down fixed industrial processes and real-time digital monitoring to eliminate batch variance and ensure repeatable excellence.

Engineered precision

For designers pushing the envelope of complex geometry, we offer metrology-led validation using high-speed laser scanning and CMM verification. Our engineering-first audit identifies DFM risks early, giving teams the data-backed confidence required for mission-critical parts.

Process controlled manufacturing

Delivering cost-effective manufacturing without compromising performance. By optimizing design and material selection at the DFM stage, we minimize total landed costs and material waste while maintaining the highest technical outcomes and standards.

DEFENSE / UAV

Aerospace

Military-grade VTOL assembly engineered for high-precision mission reliability. We provided isotropic HP MJF PA12 structural airframes. Integrated in-house post-processing and tactical assembly.

PA12 / PAINT / ASSEMBLY

MEDICAL IMAGING

Precision Health

Handheld retinal imaging systems representing 5+ years of continuous production excellence. We provided clinical-grade Med-SLA and MJF components with full clinical assembly.

SLA / MJF / PAINT / ASSEMBLY

ROBOTICS / VTOL

Precision Robotics

Aircraft-grade machined components for long-endurance platforms. High-complexity 5-axis CNC rotor hubs with sub-10 micron tolerances for mission-critical reliability.

AL-7075 / 5-AXIS / MICRON

ADVANCED DESIGN UNIT

Digital Twin

High-resolution 3D scanning and CAD replication for performance consumer appliances. We provided advanced teardowns and DFM optimization for our customer.

3D SCAN / SOLIDWORKS / DFM

GLOBAL SCALE. LOCAL PRECISION.

NON DISCLOSURE AGREEMENT

We sign a safety agreement first to keep your data safe, then an engineer checks your file immediately.

EXPERT ADVICE

Our team reviews your design and gives you a fixed, clear price for your production run.

VENDOR SETUP

We provide all the paperwork needed to set us up in your system within minutes.

PRODUCTION

Track your project from start to finish with our real-time digital update system.
